

Fig. 1

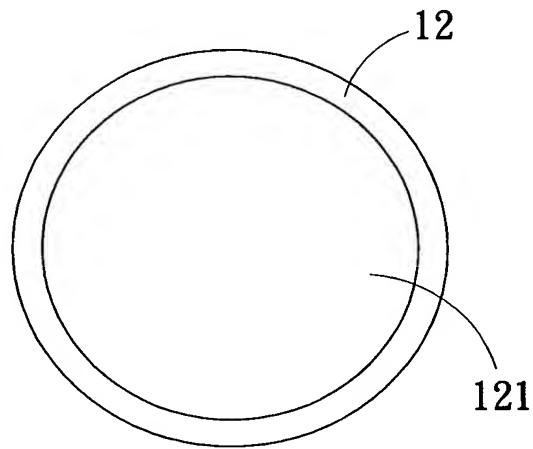

Fig. 1A

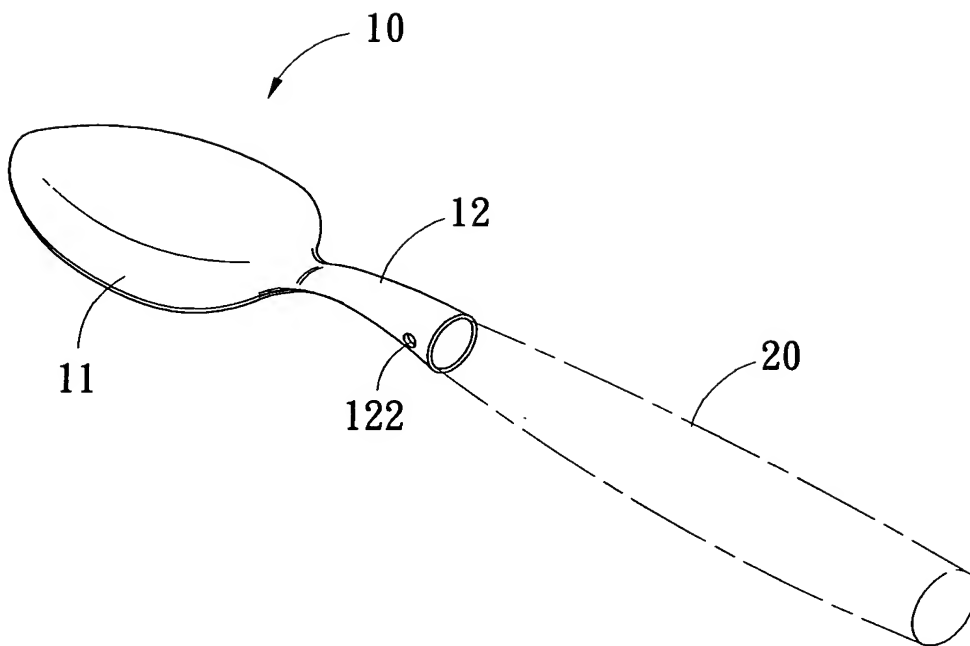

Fig. 2

To make a main part of a utensil by integrally shaping to render one end of the main part to have a utility portion, to render a handle-connecting portion to be formed and extended to a direction away from the utility portion (the handle-connecting portion is in the form of a hollow barrel), and to render an opening to be provided on an outer end of the handle-connecting portion, and to render a fixing hole to be provided near the opening

to form a handle by injection shaping, extruding as well as melting to make the handle be tightly connected to the interior of the hollow barrel of the handle-connecting portion as well as extended outwardly to complete the handle for holding by a hand and integrally connected with the main part of the utensil.
